

Lifeguard Balustrading offers a new dimension in safety for your family whilst maintaining functional and stylish characteristics.

Lifeguard offers designers and homeowners the flexibility of using a variety of custom and standard designs, which makes it a practical and important feature of your home.

Due to the unique assembly and installation process of the system there are no visible fixings or welding required. The use of low maintenance aluminium and stainless steel fixings will ensure that the Lifeguard Balustrade will look good and protect family and friends for years to come.

The Lifeguard Balustrade is suitable for use as a balustrade, pool fence or room dividers, and is designed to incorporate either safety glass or aluminium balusters.

Installation of the Lifeguard Balustrade is a simple and fast procedure using a unique centre spigot and chemical anchor fixing system. The top rail is fitted continuously for up to 6.5m, eliminating unsightly joints or cast rail joiners supplied on traditional balustrade systems.

Lifeguard Balustrading can be manufactured and glazed in the factory or built on-site making it a very flexible and practical system. It can be supplied in various powder coat or anodised finishes making it ideally suited for use in coastal locations.

For maximum sizes and design performance limitations please consult your local lifestyle distributor.
